Agricultural Statistics 1984

85-5595/

on the front cover . . .

The front cover shows an outline map of Saskatchewan indicating the nine crop districts and three soil zones. Much of the crop and livestock production data in the handbook is presented by crop district. The soil zone demarcation shows the variation in growing conditions in Saskatchewan.

As most of Saskatchewan's soil is predominantly of loamy texture, production capabilities are determined largely by weather conditions and the presence of organic matter. The brown soil zone covers 21.0 million acres in southwest Saskatchewan. The relatively warm temperatures, lack of moisture and lack of organic matter in this arid region limit crops to small grains and the use of grassland for livestock production.

The dark brown soil zone, covering 18.3 million acres, lies north and east of the brown zone. A small area, with the characteristic cooler temperatures and more moisture, is also evident around the Cypress Hills in southwest Saskatchewan.

The black soil zone covers 26.2 million acres in the north and east of our agricultural area. The growing period is shorter but the lower temperatures and increased moisture allow for a wider variety of cropping practices.

Foreword

Agricultural Statistics is a handbook containing Saskatchewan agricultural statistics. Agricultural Statistics 1984 is our ninth statistical handbook and includes 1983 and, where available, 1984 statistics on the agricultural financial situation, crops, livestock and weather.

Sources of the information contained in this handbook include Statistics Canada, Agriculture Canada, Canada Grains Council, Canadian Wheat Board, Canadian Grain Commission, Environment Canada, Farm Credit Corporation, Manitoba Department of Agriculture, Saskatchewan Crop Insurance Corporation, Saskatchewan Pork Producers Marketing Board, Saskatchewan Sheep and Wool Marketing Commission and the Branches and Agencies of Saskatchewan Agriculture.

We hope the handbook will be useful to agriculture's decisionmakers — producers, agribusiness, government. We welcome suggestions for changes and improvements. If you have any comments or enquiries, please contact:

[1]Capacity is measured in tonnes of wheat storage capacity.
[2]Effective the 1984-85 crop year the Canadian Grain Commission allowed operators of primary elevators to licence two or more adjacent facilities, which were under the control of a single manager, as a single primary elevator.
